P process

Code Purple (acute PR and problem burndown) × EVERRED (recursive health monitor) across ABACUS, CODEX, cryoplant-project and the support repos.

1. Where each repository is now
2. One process, two modes
3. When the mode switches
4. BASIC rulesets and drift
5. Open roots by severity
6. Build, refresh, verify

1 Where each repository is now

CODE PURPLE CP-2026-10-12-ABACUS-MERGE-STALL

NOT LIFTED

2 of 5 lift criteria · census 2026-10-18 13:17 UTC

UNGATED ABACUS MERGES SINCE #1858

97

97 merged with red checks

RULESET PROBE

6 / 6 red

expected BASIC rules missing

EVERRED ROOTS

15

closure 0.2 · replay UNKNOWN

REPOSITORY	MODE	RULESET	OPEN ROOTS	WORST	WHY
ABACUS	code purple	red	6	P0	E2: Code Purple case open, 2 of 5 lift criteria met; E1: ABACUS-RC-2026-0001 P0 control-plane probe red
CODEX	everred	red	2	P1	standing monitor
Q_engineering_tools	everred	red	1	P3	standing monitor
cryoplant-project	everred	red	1	P1	standing monitor
gg_MATH	everred	red	1	P2	standing monitor
pipeline-automation-hub	everred	red	1	P2	standing monitor

2 One process, two modes

Code Purple · acute

PR and problem burndown; highest priority; most resources focused on one admission blocker.

Entry	incident.yaml declared by the owner (kit/incident.yaml)
Exit	all lift criteria L1-L5 met, then close-out hands every inherited red to EVERRED as a root
Break glass	owner only, one-time bypass actor, never delete rules; re-read rule content after (L2)

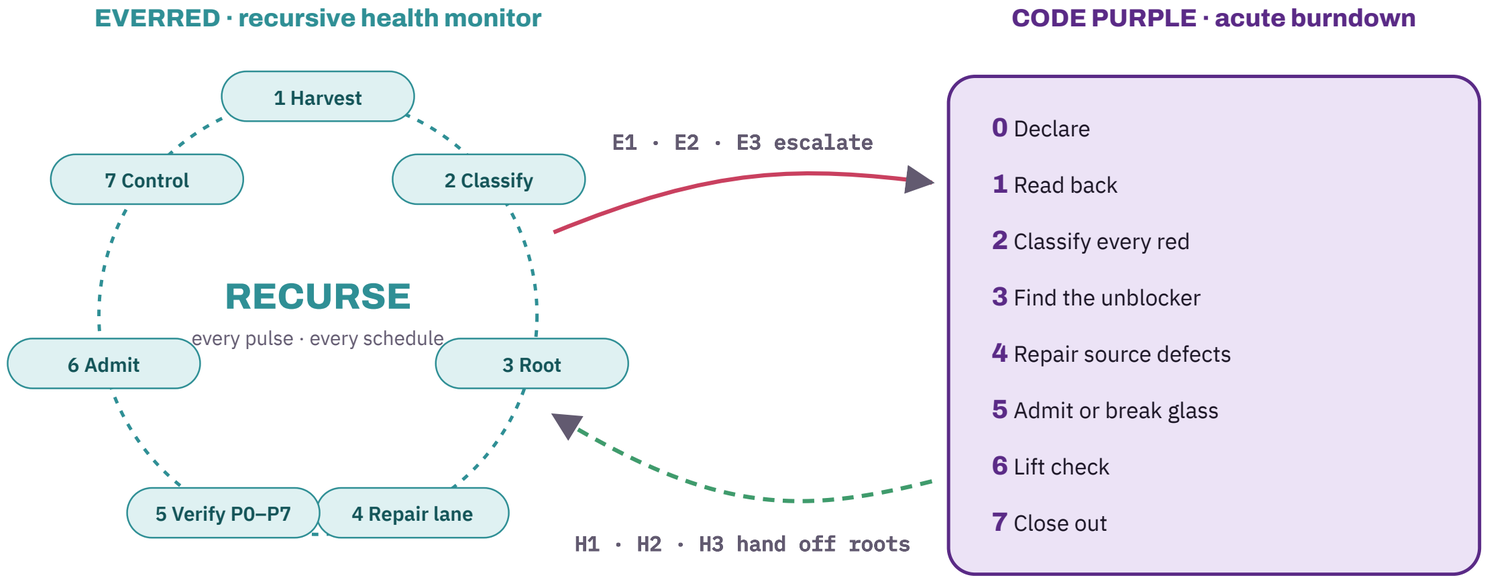

Code Purple page · deck PDF

EVERRED · recursive

health monitor; continuous root-cause repair; recursive (RECURSE every pulse).

Loop	harvest → classify → root → repair_lane → verify_progressive → admit → control → recurse
Cadence	every pulse and on schedule; each everred.json is an immutable census row
Rule	one root → one owner → one repair → consumers revalidated

EVERRED register

3 When the mode switches

Escalate · EVERRED → Code Purple

E1	a P0 root has a red control-plane probe (gate absent; merges admitted ungated)
E2	a Code Purple case for the repo is open and not lifted
E3	the owner declares (merge stall, reviewer outage, same red on most open PRs)

Hand off · Code Purple → EVERRED

H1	all lift criteria met; close-out filed
H2	every red seen during the case has a root ID or an alias in everred/roots.yaml
H3	work items that are steady burndown (coverage floor, debt cohorts) move to EVERRED lanes while the case stays open

Per case

SCENARIO	MODE	FIRST STEP, THEN
Admission deadlock (merge flow stalled)	CODE_PURPLE	readback; classify every red against main nightly
Required gate missing or emptied	CODE_PURPLE if P0 (E1), else EVERRED P1 lane	verify_rulesets.py; owner imports the BASIC ruleset
Inherited red recurring on many PRs	EVERRED	harvest; one root, one lane, one owner
Security finding	EVERRED security lane	matched-fingerprint burndown; independent verifier closes
Required reviewer or runner outage	CODE_PURPLE	owner-attested fallback; lift on restored capacity
Coverage below floor	EVERRED ratchet	floor never lowers; breadth x depth cohorts

4 BASIC rulesets and drift

Each BASIC ruleset: no deletion, no force-push, PRs with review threads resolved, and required checks that ran green on every recent PR and are not path-filtered. Bypass list empty: break glass by adding a bypass actor for one merge, never by deleting rules. **The owner imports these; agents never apply rulesets.** Drift probe at 2026-10-18 13:19 UTC.

REPO	REQUIRED CHECKS	EFFECTIVE RULES NOW	DRIFT	IMPORT FILE
ABACUS	YAML syntax scaffold, smoke, a10-guard, dependency-review	deletion, pull_request, non_fast_forward	red review-thread resolution off; required_status_checks missing	ABACUS.basic.json · ABACUS.hard.json
CODEX	lint, self-smoke (3.12), bandit, governance-adversary	none	red deletion missing; non_fast_forward missing; pull_request missing; required_status_checks missing	CODEX.basic.json
cryoplant-project	verify, recurrence-control, federation-smoke	none	red deletion missing; non_fast_forward missing; pull_request missing; required_status_checks missing	cryoplant-project.basic.json
gg_MATH	first-kernel, monte-carlo-reference	none	red deletion missing; non_fast_forward missing; pull_request missing; required_status_checks missing	gg_MATH.basic.json
pipeline-automation-hub	validate-ultra-control, canonical-self-test-and-mutation	none	red deletion missing; non_fast_forward missing; pull_request missing; required_status_checks missing; required_linear_history missing; copilot_code_review missing; ruleset 25252917 'QPS TRAIGE project' is active but targets no branch	pipeline-automation-hub.basic.json
Q_engineering_tools	build-and-exercise, engineering-source-smoke	none	red deletion missing; non_fast_forward missing; pull_request missing; required_status_checks missing	Q_engineering_tools.basic.json

5 Open roots by severity

Seven dimension chips per root, in order: diagnosis, repair, integration, security, governance, admission, control. UNKNOWN never counts as green; derived reds (aggregators) are not roots. 374 occurrences, 68 signatures, 64 not yet linked to a root.

ROOT	SEV	TITLE AND DIMENSIONS	STATE	OCC.
ABACUS-RC-2026-0001	P0	**ABACUS default branch has no required status checks (rules emptied 12 Oct; partly restored 15 Oct)** confirmed · proposed · na · na · ineffective · na · uncontrolled	blocked authority	0
ABACUS-RC-2026-0002	P1	**Fixed 75% repository coverage threshold above measured main coverage (structural admission deadlock)** confirmed · proposed · not evaluated · na · unknown · hold · uncontrolled	owned	0
ABACUS-RC-2026-0004	P1	**Bandit full-scan security debt (6,363 raw observations)** candidate · none · not evaluated · red · unknown · hold · uncontrolled	triaged	11
ABACUS-RC-2026-0005	P1	**DMAIC measurement-receipt failure broke the broad coverage suite** confirmed · committed · exact head passed · na · ineffective · na · under observation	producer green	0
ABACUS-RC-2026-0008	P1	**Safety scanner exit 64 (unclassified: auth, invocation, version or vulnerability)** unresolved · none · not evaluated · unknown · unknown · hold · uncontrolled	discovered	0
CODEX-RC-2026-0003	P1	**CODEX default branch unprotected (no ruleset)** confirmed · proposed · na · na · ineffective · na · uncontrolled	blocked authority	0
CRYO-RC-2026-0001	P1	**cryoplant-project default branch unprotected (no ruleset)** confirmed · proposed · na · na · ineffective · na · uncontrolled	blocked authority	0
ABACUS-RC-2026-0003	P2	**Code-quality full-red surface (Black / isort / Flake8 umbrella)** candidate · none · not evaluated · na · unknown · hold · uncontrolled	triaged	8

6 Build, refresh, verify

Refresh (needs a GitHub token with read access)

```
python refresh.py            # readback, drift probe, harvest, decide, pages, PDFs
python refresh.py --offline  # rebuild pages and PDFs from the committed data
```

Pages re-read `data/*.json` every 5 minutes while open; a new census appears once refresh.py republishes it.

Verify

```
python -m unittest discover -s tests -v
node tools/check_model.mts   # model integrity (TypeScript)
npx -y -p typescript@6.0.3 tsc -p tsconfig.json
```

CI: `.github/workflows/p-process.yml`, offline, no secrets.
